❖ **Why the guest network is separated:**

- ✓ The guest network is separated to improve security and protect internal resources. Guests are able to access the internet but cannot access the internal servers or computers of the organization.

❖ **Why is IP planning important?**

- ✓ IP planning is important because it ensures that devices have unique addresses, prevents conflicts, and makes network management and troubleshooting easier.
- ✓ Planning also facilitates the identification of unauthorized devices as well as security threats overall promoting network security.
